

Đinh Công Minh

Data Analyst Intern

☎ 0338522101 ✉ congminh311204@gmail.com 📍 Ha Noi [Linkedin](#) [Github](#) [Portfolio](#)

SUMMARY

Final-year Data Science student at Hanoi University of Mining and Geology (HUMG) with hands-on experience across the data analytics lifecycle. Possess strong core competencies in Data Visualization, Data Modeling, SQL, Exploratory Data Analysis (EDA), RDBMS and Python. Proven track record of designing robust relational databases, engineering interactive dashboards, and transforming raw datasets into actionable business insights, complemented by a foundational understanding of ETL processes and Machine Learning. Highly motivated to leverage my practical analytical skills to solve complex problems, support data-driven strategies, and advance a career in the data analytics field.

EDUCATION & CERTIFICATIONS

Data Science - HUMG | 2022-2027 (Expected: Dec/2026)

Professional Certifications:

- Google Data Analytics Professional Certificate | Coursera | [Link](#)
- Google Advanced Data Analytics Professional Certificate | Coursera | [Link](#)
- Google Business Intelligence Professional Certificate | Coursera | [Link](#)

EXPERIRNCE

Business Intelligence Analyst Intern - KPIM | Apr/2026 – Aug/2026 | [Project](#)

- Gathered business requirements and analyzed underlying data structures to develop comprehensive Project Management (PM) documentation, guiding the end-to-end report building process.
- Executed a customer segmentation project by extracting and transforming Data Warehouse data via SQL, applying custom priority based logic to categorize customers effectively.
- Developed interactive dashboards strictly aligned with stakeholder specifications, engineering precise calculation functions (DAX), and delivering analytical content to drive strategic operational decisions

RELEVANT PERSONAL PROJECTS

Financial Market Forecasting (Machine Learning) | Python, Pandas, Deep Learning | [Github](#)

- Extracted and processed large-scale raw time-series data (HPG and MBB stocks) to support the experimental training of hybrid machine learning models.
- Conducted Exploratory Data Analysis (EDA) using Python to detect market trends and prepare robust datasets for predictive modeling.
- Developed deep learning architectures including CNN, Bi-LSTM, and Attention mechanisms to predict financial stock prices, evaluating model performance via RMSE metrics.

HR Turnover & Operations Analytics | Power BI, SQL, Excel | [Github](#)

- Engineered a comprehensive dashboard for human resources and operations utilizing a historical dataset spanning from 2014 to 2023.
- Executed data preprocessing and engineered complex DAX formulas—specifically utilizing per-row iterators for employee tardiness calculations—to generate precise metrics including Turnover Rate and Retention Rate.

SKILLS

Data Analysis & Query: SQL (CTE, subqueries, and Window Functions)

Data Visualization & Report: Power BI, Excel/Google Sheets

Programming & EDA: Python (Pandas, NumPy)
